VELLORE INSTITUTE OF TECHNOLOGY, BHOPAL

Name – Gayatri Kishor Solunke

Registration No. - 25BCY10280

Institute - VIT University, Bhopal

Branch - Computer Science And Engineering

Academic Year: 2025-2029

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to **VIT Bhopal University** for providingthe **VITyarthi E-Learning Platform**, which served as the foundation for this course.I am grateful to the faculty of the **CSE0001 - Digital Literacy** course for designing acurriculum that emphasizes practical, real-world digital skills.

Special thanks to my instructors for their guidance throughout the five modules,from professional communication to cybersecurity awareness. I also appreciate thecreators of the open-access tools used in this project—including **GitHub, Canva,and Google Workspace**—which allowed for a seamless, browser-based learningexperience. Finally, I thank my peers for their collaborative spirit in exploring thesedigital platforms together.

Introduction: Project Overview and Scenario

As a newly selected **Student Digital Ambassador** at VIT Bhopal, my mission is to guide my peers through the complexities of our modern digital world. This project isn't just an assignment; it’s a foundational **Digital Literacy Portfolio** designed to show how we can communicate safely, build professional identities, and stay responsible online.

The journey is broken down into five key milestones. I started by creating a visual guide to digital literacy, then moved on to building a professional presence on platforms like **LinkedIn** and **GitHub**. I also explored technical tools for coding and collaboration, refined my professional emailing skills, and dived deep into the world of cybercrime prevention. By organizing all this work into a single GitHub repository, I’ve created a roadmap that I hope will help my batchmates navigate their own digital careers with confidence.

Task - 1

In this task canva tool was used for creating visual single infographic or visual slide that covers 3 topics that were: what digital literacy is, useful digital tools for students, safe internet practices.

The design shows the 3 topics on different sticky notes so the viewer doesn’t get confused while understanding it, and the top rectangular note explains the motive of the presentation.

Portraying your mind visuals on a desktop was the most interesting part while making it, and there was no such difficulty while making it, but the crucial stage was deciding which elements to use to represent visuals clearly, and this stage glorifies our decision-making skills.

This presentation will help the viewer to understand digital literacy, its tools, and safety measures everyone should practice to protect themselves from hackers. Any prior knowledge about complex topics is not required to understand it, so the viewer does not have to face any complexity while

comprehending that makes this presentantion acknowledgable to everyone with no or basic information.

Task - 2

For this task, I have created my profile on GitHub, LinkedIn, and Kaggle platforms. These platforms are very useful for students and professionals to have a good online presence and improve their online reputation.

GitHub is a platform where you can share your projects and code repositories related to coding and computer science projects. It is very useful for having a portfolio and allowing users to access and view your progress and achievements. LinkedIn is a professional networking site where students can connect with their classmates, teachers, and professionals in their respective fields. This site is very useful for exploring internship opportunities, jobs, and career guidance.

In the next four years, I plan to utilize these platforms for enhancing my skills in computer science and related fields. I would upload my projects on GitHub, update my profile on LinkedIn with my achievements and qualifications, and practice on Kaggle for learning new concepts and enhancing my skills in data science. This would not only enhance my skills but would

also boost my confidence for facing new challenges in my upcoming career.

Task - 3

Starting out, I picked HackerRank along with Google Forms to build up how I write code and work with others. A first step was setting up a profile on HackerRank, then jumping into one of their entry challenges. That small task sharpened my grasp of core coding ideas while stretching how I tackle issues. Working through it meant actually typing scripts, tracing thought paths, plus spotting mistakes when things broke. Slowly, doing that made solo attempts at short programs feel less shaky.

One way I worked together was building a “Digital Literacy Awareness Quiz” using Google Forms. This quiz had five questions - some you pick from choices, others needed brief written replies. Instead of just collecting answers by hand, I looked into how each response flows straight into Google Sheets. That live update showed me how digital tools gather information without extra steps. Seeing everything sort itself helped make sense of organizing data in real time.

One thing leads to another when learning gets practical. HackerRank sharpens how I write code, a must-have for tough exams and job interviews later. Without it, keeping up would be harder than necessary. Google Forms collects answers fast while Sheets turns numbers into something clear and useful. Working with others feels smoother because everyone sees the

same version at once. Skills grow quietly when tools handle routine tasks behind the scenes. Efficiency shows up not in speed but in fewer mistakes over time.

Task - 4

Situation of Poor Digital Communication:

A wrong tone online might cause bigger trouble than expected. Think of someone emailing a teacher without a proper greeting, skipping a title, just typing fast like texting a friend. That note could get set aside, maybe never answered, since it feels careless. Mistakes happen when details are missing. Opportunities slip away while both sides think the other is ignoring them.

Avoiding this mess would've taken just a bit of standard email sense. A straightforward title on the message, some courtesy at the start, followed by a calm explanation might have changed things entirely. Respect shows up when words are arranged thoughtfully. Clarity comes easier when thoughts flow in order instead of chaos.

Beyond message delivery, handling how you come across matters - especially when navigating spaces tied to work or study. A person's online presence often speaks before they do.

Task - 5

What caught my attention during research on phishing attacks? Their shocking simplicity - and how well they work. Not every hacker needs fancy tools; many just wait for someone to feel rushed or overlook details. A single click on the wrong address might open doors to drained accounts or stolen information.
Now I see why paying attention online matters so much. Clicking without thinking - especially on messages that seem safe - will stop today. Instead of rushing, I'll check where things really come from first. Before doing anything, I take time to confirm what's real.
This study showed something quiet yet clear: safety on the internet isn't about complex rules, instead it grows from attention, steady choices, a calm approach to digital life.

CONCLUSION

Completing this project has significantly enhanced my digital competence and confidence as a Student Digital Ambassador. I have learned that digital literacy extends far beyond basic computer skills; it encompasses the ability to present oneself professionally on platforms like LinkedIn and GitHub, collaborate effectively using cloud tools, and communicate with proper etiquette. Furthermore, researching cybercrime has highlighted the critical importance of vigilance in the Indian digital ecosystem. Ultimately, this assignment has taught me how to curate a permanent digital footprint that is both secure and professional, providing a strong foundation for my future academic and career endeavours.
